

Looking for a creative way to encourage employees to improve their Cyber Security Practices?

Do you have employees who access your servers from home?

Who doesn't like free stuff?

**LastPass**...

One of our corporate members came up with a great idea to encourage their employees to practice better cybersecurity.

What they did was offer a FREE password manager to them.

Not only do they get a password manager for work, but they receive 5 additional licenses for home use.

The objective of this information is not to promote LastPass, but to demonstrate a way of encouraging employees to adopt better security practices.

## Why do this?

Promote use of MFA

Reduce the number of reused passwords

Reduce the number of weak passwords

## SSO

Reduce passwords while increasing ease of employee access with [Single Sign-on \(SSO\)](#). With an integrated single sign-on and password manager solution, LastPass provides control and security for every access point.

- ✓ Add an unlimited number of SSO applications, with over 1,200 apps already pre-integrated.
- ✓ Automate onboarding and offboarding to cloud applications.
- ✓ Revoke access to key applications when an employee leaves.
- ✓ Reduce the number of passwords employees must memorize.
- ✓ Allow IT visibility into apps to identify gaps in access security.

[Learn More about SSO](#)

Password managers such as LastPass have tools built in such as a password generator.

It allows LastPass to create a password based upon parameters that you outline. It will randomly create any length and complexity that you can copy and paste into any site.

# LastPass Families as a Benefit

Proper password hygiene is critical to keeping professional and personal data secure. Take control of your business' data by encouraging your employees to do the same. Enable your employees – and their families – to live and work securely from anywhere with Families as a Benefit. With Families as a Benefit, individual users and families can:

- ✓ Grant 5 additional LastPass licenses to their family and friends
- ✓ Store and protect their passwords across all devices
- ✓ Create unlimited shared folders for easy family sharing
- ✓ Improve and enforce password hygiene by using the security dashboard

The screenshot shows the LastPass web interface. The top navigation bar includes the LastPass logo, a search bar, and an 'Upgrade' button. The user is logged in as 'john.smith@lastpass.com'. The main content area is titled 'Families as a Benefit' and contains the following text: 'Your company has partnered with LastPass to provide LastPass Families for free. Activate now and invite up to 5 others. Learn more'. Below this text is a button labeled 'Activate LastPass Families for Free'. There are two status indicators: 'Status' with a 'Not Claimed' button and 'Account linking' with a 'Not Linked' button. A large green banner at the bottom of the screenshot says 'Nice work! You linked your personal and business accounts.' with a 'Back to Account Benefits' button.

## Simplify IT oversight with one admin console

Help your IT department work without wasting time. The LastPass admin console provides your IT team with complete oversight. They can manage all their daily tasks from the admin console, whether they need to:

- ✓ Oversee employee password management
- ✓ Update security policies
- ✓ Provision and deprovision users
- ✓ Deploy authentication methods for onboarding and offboarding
- ✓ Federate user logins to LastPass
- ✓ Produce admin security reports

Streamline IT's responsibilities by providing them with a one-stop security management dashboard.

The screenshot displays the LastPass admin console interface. The top navigation bar includes the LastPass logo, a search bar, and a user profile icon. The left sidebar contains navigation options: Users (selected), Groups, Admin, and Directories. The main content area is titled 'Users' and features a search bar, a table of users, and an 'Add users' button. The table has columns for selection, email, name, MFA status, and last login time.

## Summary

By providing the employees with tools to better secure their on line habits, we create an awareness of cybersecurity weakness to better educate for a safer home and work environment.

By providing the password manager to the employees, we reduce the risk of being breached due to weak passwords or lack of multifactor authentication.

By providing the employees with decent tools, we promote a more safe cyber security work place.

LastPass is not the only tool available for password management, but it is the choice for this demonstration.
